Summary

- Front-End Developer with experience in developing end-to-end full-stack web applications
- Created a crypto news aggregator app that displays daily crypto news and trending NFTs
- Experienced in creating e-commerce web systems with checkout and profile features
- Proficiency in developing responsive web apps using React.js, Next.js
- Highly proficient in developing, testing, and supporting web apps using JS, ES5, Sass, Tailwinds

Experience

Front-End Web Developer   Dec 2021 to Present
Chingu

- As part of a Scrum team, I built cutting-edge frontend projects and Full Stack projects from the ground up and deployed them in six weeks
- Successfully designed attractive layouts using Figma and built frontend according to the designs using Tailwinds, Sass
- Used Front-End frameworks such as Reactjs and Next Js to build multiple responsive components for each app created
- Added fixes and features to the projects using git and Github
- Reviewed code weekly and fixed outstanding merge conflicts that may have occurred

Customer Service Representative   Sept 2018 to Mar 2021
National Logistics Services, Mississauga

- Reviewed and answered all customer inquiries (via telephone, email or in-person) in a polite manner with a customer-focused service
- Watched Puma and Cobra accounts and cooperated with my team to relay information to the customer
- Authored about 40 instructions on how to Enter, edit, and process customer orders using PKMS or WMi systems
- Liaised with the team on behalf of customers to ascertain the status of orders, inventory, and special requests

Projects

Token-Train | **[Github Link](#)** | **[App](#)**

- The application brings together cryptocurrency news and resources to learn about crypto and non-fungible tokens (NFTs), and top NFT sales information.
- Was responsible for fetching the crypto news API data to our app and looping through the data using the map function to display all news articles. Added a filter and had it filter according to the news source.

Tools: React.js, Bootstrap, Javascript, CSS, SASS, HTML, Figma

Shop-Shop | **[Github Link](#)** | **[App](#)**

- Shop-shop is an e-commerce app that allows users to sign up and shop for various items.
- This project refactors a fictional e-commerce application to use Redux for global state control, paired with a React front end, Node.js and Express.js for the back-end server, and MongoDB for the database. Stripe is used for payments

Tools: JavaScript, Reactjs, Node.js, Express.js, MongoDB, Stripe.js, Redux

Love-Lorena | **[Github Link](#)** | **[App](#)**

- Wedding Planner app that displays their services and good reviews.
- Made this site completely responsive using CSS breakpoints and flexbox which will fit on any screen. Using react-photo-gallery created a responsive photo gallery to fit on any screen

Tools: HTML, CSS, JavaScript, Flexbox, React.js, React-router, react-photo-gallery

Education

University of Toronto   2020 to 2021
